

LuaEduTools users:

- 1) Extract the zip file in `../lua_edu_tools/adds/` folder
- 2) Type the red line in `config.lua` file

---

---

```
-- Define the list of elements that are included in the 'Addon Visibility' setting window.  
-- To remove an element, just add a comment mark '--' before its name.
```

---

---

```
adds =  
{  
    "Asteroid_Belt",  
    "Large_Scale_Universe",  
    "Dying_Sun",  
    "Atmosphere_Composition",  
    "Political_Borders",  
    "Meteorite_Impacts",  
    "Earth_Volcanoes",  
    "Earthquakes",  
    "Tectonic_Plates",  
    "Large_Igneous_Provinces",  
}
```

---

---

This addon has the clickable propriety set to true. In order to display the LIPs image when *MoreInfo* is checked, type the strings below in `../infos/infoImage.lua` file:

---

---

```
-- Image filenames for LIPs:  
  
["Large Igneous Provinces"] =  
  
{  
    "../adds/Large_Igneous_Provinces/images/lips_me.png";  
};
```

---

---

Note that `../images` subfolder is relevant to the add-on directory, and isn't the default one.

- 3) Start Celestia; the add-on is now installed in the LuaTools add-on visibility window.
